

2020 Creation Science Dry Falls/Missoula Flood/Scablands Field Trips

Date: June 6, Aug 1 and Sept 12 (other dates by special arrangement)

Sponsored by the Apologetics Forum of Snohomish County

Tour Leader: Ron Payne

Families, youth groups, homeschool groups, church groups and individuals are invited to a one-day field trip that will illustrate that the face of the earth can be dramatically changed in a few minutes or hours. It doesn't take millions of years! We will visit an outstanding example of these events in our own back yard.

Dry Falls (Missoula Flood Scablands):

For many years, geologists thought that the channeled scablands and dry falls of Eastern Washington were carved out by gradual processes over many thousands of years. Now it has been established that they were caused by a massive flood event. See deep canyons hundreds of feet deep carved in solid basalt rock, yet no flowing water is present! We will discuss how these sites support the Biblical history of a world-wide flood.

The field trips are one-day Saturday excursions. We will visit Dry Falls along with 5-6 other sites. Ron Payne will lead the field trips and show how the devastating Lake Missoula Flood quickly altered the landscape. Participants will caravan in their own cars (meet in Woodinville or Monroe and travel to Dry Falls east of Wenatchee on Hwy 2). The trip is limited to 10 vehicles, so carpooling is encouraged.

A recommended minimum donation of \$10 per person is requested to cover the trip costs. There is no fee at Dry Falls. Discovery Pass is not required. Mike Oard's Missoula Flood book and DVD will be available during the Dry Falls field trip.

Sign-up by contacting Ron Payne: call 425-820-2897 or email creationrj@comcast.net
